# Current & Voltage Calibrator

**Quick and easy Current and Voltage source for setting up engineering units on any process display**

## Features:

- Precision outputs (0 to 8V or 0 to 40mA) to both the device under calibration and to a digital multimeter where output is displayed
- Accuracy is DMM spec
- Complete with 9V battery, spade lugs to connect to device under calibration and built-in banana plugs to connect to Voltage and COM sockets of DMM

## Ordering Information:

401510 **.....Current & Voltage Source DMM Adaptor**
